Mr. P R Nadaraj. Developed a “Multi Angle power weeder”. The weeder is powered by a 5 HP diesel engine with walking type shallow tiling mechanical intercultivator. This is a three wheeler moving type mechanism, equipped with 2 traction tyres or log wheels, and operated by a single person. The innovation Weeds the crops in row without affecting the branches of the adjacent crop. This multi angle power weeder has a benefit of annexing soil to the grown plants.

ABI ICRISAT extended support in technology consultancy, Funding networking and business development, product promotion at events and exhibitions.
